

Quick Attack Equipment

USES

- | The INFOREST quick attack equipment stands out for its functionality, being able to access reduced spaces other fire trucks cannot access. Due to its characteristics, ideal for fighting fires in their initial stage, it offers a quick response to different types of emergencies. Made up with a GRP tank with breakwaters and reinforced with stainless steel, it is a light product (90 kg empty) with a load capacity of up to 750 l of water and 15 l of foam and a product that can be easily unmounted thanks to the incorporation of lower skids and side handles.
- | Thanks to its reduced dimension of 1 square meter, the Quick Attack Equipment has been designed to be mounted on any single or double-cab vehicle and to be easily unmounted thanks to the incorporation of lower skids and side handles
- | It has high performance Mercedes Textiles motor pumps of the following models: Wick 100-4H (4-stroke engine), Wick 100G (2-stroke engine) or WickSi 250 (4-stroke engine), which, being centrifugal, allow to apply foam or water, with the ability to replenish and even operate with external sources, achieving suitable flow and pressure for works requiring fog-type jet and without water being dragged by the wind. It guarantees safety, protection and fire suppression capacity when the professional work requires it.
- | The system also incorporates the INFOREST reel, manually operated with 25 meters of 1" winder and with an automatic locking device.
- | It can use different options: full-jet, mist, fixed jet or adjustable flow nozzles, achieving a product adaptable to the needs of each client.

Quick Rescue Equipment

DETAILS

MOTOR PUMPS

It has high performance **Mercedes Textiles** motor pumps of the following models: **Wick 100-4H (4-stroke engine)**, **Wick 100G (2-stroke engine)** or **WickSi 250 (4-stroke engine)**, which, being centrifugal, allow to apply foam or water, with the ability to replenish and even operate with external sources, achieving suitable flow and pressure for works requiring fog-type jet and without water being dragged by the wind. It guarantees safety, protection and fire suppression capacity when the professional work requires it.

Mercedes Textiles
Motor Pump

DISCHARGE OUTLET

It has a 1.5" discharge outlet to connect hoses. The power of the motor pump allows to couple 5 hose runs with excellent pressure and nozzle flow.

TANK

The tank comes with basic tools as standard accessories: hand primer, clamping system, suction hose with foot valve, and a 5-meter filter.

INFOREST REEL

The system incorporates the manually-operated INFOREST reel with 25 m of 1" winder, and with automatic locking device. An electric or pneumatic winding system can be chosen.

NOZZLE

There are different options of 1"-nozzles available: full-jet, mist, fixed jet or adjustable flow, achieving a product adaptable to the needs of each client.

Working with a **Protek 360** nozzle with adjustable flow allows up to 30 minutes of autonomy with the possibility of also applying foam or retardants just with the dosage selection in the tank incorporated to such end.
